

Lab 04 Create a One-Minute Micro-Drama Episode

Course: Agentic AI for Video Creation (TGS-2023036088) Version: v4.0 Main result: micro-drama-pilot.mp4, series-bible.yaml, character-bible.yaml, storyboard.md and continuity-review.md

Goal

Create a series promise, character bible, six-shot storyboard and consistent one-minute pilot episode using the Hermes agentic pipeline.

What you will use

- data/series-bible.yaml
- data/character-bible.yaml
- starter/storyboard-template.md
- starter/micro-drama-prompts.md
- AI-PROMPTS.md and AI-PROMPTS.pdf - copy-ready prompts and examples.
- evidence/checklist.md and evidence/checklist.pdf - a simple review checklist.

Steps

1. Define series
 2. Create character bible
 3. Write episode
 4. Storyboard six shots
 5. Create and assemble
 6. Audit continuity
1. Open this lab folder as the project in Hermes Desktop.
 2. Read the examples in AI-PROMPTS.md before writing your own version.
 3. Ask Hermes to show the creative plan before it creates or publishes anything.
 4. Review the output as a viewer: Is the story clear? Does every shot belong? Is the style consistent?
 5. Save the draft, your feedback and the improved version in the named output folder.

Success check

The series and character bibles are complete, the storyboard covers six timed shots, the same character and setting details appear throughout, and the continuity review identifies or clears visible changes.

If something goes wrong

- If Hermes cannot see a file, confirm that this lab folder is the current project.
- If the model or service is unavailable, record what you see and use the trainer-approved option.
- If the result looks random, simplify the prompt and describe one shot at a time.

- If characters or locations change, repeat the reference image and continuity details in every shot prompt.
- If YouTube or scheduling is not connected, create a preview and stop before publishing.

Safety

Use only supplied or authorised images, audio and facts. Do not paste passwords, API keys or private account details into prompts or screenshots. Keep practice uploads private until a person approves publication.
