

Lab 03 - Generate the Script, Storyboard and Video Prompts

Agentic AI for Video Creation | TGS-2023036088 | Version v2.0
Tertiary Infotech Academy Pte Ltd | UEN 201200696W

Objective

Transform approved claims into a timed 30-second script, storyboard and shot-level generative-video prompts.

Files and setup

File	Purpose
workflow.json	Importable n8n workflow with dry-run defaults
data/mock-data.xlsx	Synthetic inputs and validation sheet
evidence/checklist.md	Acceptance evidence to retain

Detailed execution

1. Open the workbook and confirm the highlighted input rows and the Validation sheet.
2. Import workflow.json into n8n and inspect the Lab Contract sticky note.
3. Check each node's input/output contract and verify there are no embedded secrets.
4. Insert the bounded prompt below only in the designated AI/tool-adapter node.
5. Run once with approved data and once with a deliberately blocked condition.
6. Retain the final execution evidence and complete the checklist.

Copy-ready bounded prompt

Act as a short-form video script and storyboard agent. Use only approved claim_ids. Return valid JSON with exactly 30 seconds of non-overlapping beats. Each visual_prompt must specify one subject action, one camera move, lighting, continuity_token and negative_constraints.

Expected workflow path

Manual Trigger -> Approved Claims -> Script Agent -> Storyboard Parser -> Duration Validator -> Human Storyboard Review

Acceptance criterion

The storyboard totals 30.0 seconds, no beat overlaps, factual narration cites approved claims, and a named reviewer approves the storyboard.

Safety and release control

Use synthetic or authorized content. Store credentials in n8n credentials, never in workflow JSON. Human approval must bind to the exact payload hash. Keep publishing dry-run/private until the trainer authorizes a controlled demonstration.
