

Lab 07 - Orchestrate the End-to-End SocialPost and YouTube Release

Agentic AI for Video Creation | TGS-2023036088 | Version v2.0
Tertiary Infotech Academy Pte Ltd | UEN 201200696W

Objective

Connect the approved production stages into an n8n parent workflow and prepare an idempotent SocialPost YouTube upload.

Files and setup

File	Purpose
workflow.json	Importable n8n workflow with dry-run defaults
data/mock-data.xlsx	Synthetic inputs and validation sheet
evidence/checklist.md	Acceptance evidence to retain

Detailed execution

1. Open the workbook and confirm the highlighted input rows and the Validation sheet.
2. Import workflow.json into n8n and inspect the Lab Contract sticky note.
3. Check each node's input/output contract and verify there are no embedded secrets.
4. Insert the bounded prompt below only in the designated AI/tool-adapter node.
5. Run once with approved data and once with a deliberately blocked condition.
6. Retain the final execution evidence and complete the checklist.

Copy-ready bounded prompt

Act as a release-orchestration controller. Continue only when QA status is PASS and approval_hash matches the current payload. Build a multipart SocialPost request for POST /api/upload with Authorization: Apikey , video, title, user and platform[]=youtube. Keep dry_run true for learner execution and never embed credentials.

Expected workflow path

Manual Trigger -> Research Sub-workflow -> Content Sub-workflow -> QA and Approval Gate -> Build SocialPost Payload -> Dry-Run Publication Log

Acceptance criterion

The n8n run reaches DRY_RUN_ACCEPTED once, records the SocialPost payload, blocks the duplicate key, and does not expose a credential or publish publicly.

Safety and release control

Use synthetic or authorized content. Store credentials in n8n credentials, never in workflow JSON. Human approval must bind to the exact payload hash. Keep publishing dry-run/private until the trainer authorizes a controlled demonstration.
