

AI Prompts for Lab 05

Primary Hermes prompt

Use the harbour-bean-video skill. Read data/brand-profile.yaml, preserve the exact palette, typography, tone and safe margins, and render a 15-second vertical video from supplied assets. Return the output path, SHA-256, ffprobe summary and brand-check result. Do not alter the logo or invent slogans.

Planning checkpoint

Before acting, return a concise plan with inputs, files to create or change, tools or skills to invoke, side effects, approval points, acceptance tests and stop conditions. Mark unavailable paid or authenticated services as BLOCKED, not complete.

Independent review prompt

Review the produced artifacts against this criterion: The custom skill is discoverable, uses relative or Hermes template paths, creates an MP4, passes the technical probe and meets every required brand token.
Return JSON with observed_values, passed_checks, failed_checks, evidence_paths, security_findings, decision and required_repairs. Do not accept an assertion without opening the named evidence.

Repair prompt

Repair only the failed checks in the review record. Preserve approved inputs and create a new output version rather than overwriting reviewed evidence. Re-run python3 verify.py and stop if any check still fails.
